

BHARATH V

Aspiring Software Engineer | Full-Stack & AI/ML Developer

Bengaluru, India | 8618463182 | bharath33053305@gmail.com

[Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

BCA undergraduate at Garden City University with a 9.5 CGPA, specializing in full-stack web development and applied AI/ML. Founder and lead developer of UniShark, a startup ecosystem platform, and builder of multiple production-grade projects spanning Android development, AI automation, and client web platforms. Strong foundation in DSA, DBMS, and OS, with hands-on experience shipping and deploying real-world applications.

EDUCATION

Garden City University, Bengaluru 2024 – 2027

Bachelor of Computer Applications (BCA) | CGPA: 9.5

SJICPUC (Pre-University College) 2022

PCMB, PUC Board | 67.7%

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, AI & Machine Learning, Python, Java, C

PROJECTS

UniShark | *Founder & Full-Stack Developer*

Tech Stack: Next.js, TypeScript, Tailwind CSS, Supabase, Python

- Founded and built UniShark end-to-end, designing founder-matching, investor discovery, and team-formation systems to help student founders find co-founders and connect with investors on one platform.
- Owned the backend and database architecture as sole technical founder, integrating startup profiles, team formation, and investor discovery into a single product flow.
- github.com/bharathDotExe/unishark

Palash Training | *Full-Stack Web Developer (Client Project)*

Tech Stack: PHP, MySQL, HTML, CSS, JavaScript, SEO, MilesWeb Hosting

- Built and deployed a live, database-driven training platform (palashtraining.com) with an admin dashboard and blog system, now the client's primary web presence for courses and community content.
- Implemented technical SEO end-to-end — sitemaps, structured data, Open Graph tags, and Core Web Vitals — to strengthen the site's organic search visibility from launch.
- github.com/bharathDotExe/Palash-training-website · palashtraining.com

Univault | *Android Developer*

Tech Stack: Kotlin, Jetpack Compose, MVVM, StateFlow, Coroutines, Room DB, Gemini API

- Built a full Android app solo, engineering biometric (PIN/fingerprint) security and OCR-based document scanning so users can manage sensitive credentials entirely on-device.
- Designed a Brutalist + Material 3 UI with a custom animated card dashboard, and an offline fallback parser to keep the app fully functional without an API key.
- github.com/bharathDotExe/univault

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, TypeScript, SQL

Web: HTML5, CSS3, Tailwind CSS, React, Next.js, SEO

Data & ML: Pandas, NumPy, OpenCV, YOLO (learning), Google Gemini API, Prompt Engineering, AI Automation

Backend: Node.js, PHP

Databases: Supabase, MongoDB

Tools & Platforms: Git, GitHub, VS Code, npm, Vercel, Postman, n8n, Figma, Canva

Currently Learning: Docker, Kubernetes, Cloud Computing

ACHIEVEMENTS & INTERESTS

- Founded and built UniShark, a full-stack startup ecosystem platform, from concept to deployment.
- Actively building Suraksha, a multi-agent AI system (ADK Python, Gemini 2.5 Flash) to detect fake job/internship offers, for the Google for Developers × AI House × HiDevs AI Agent Builder Series 2026 hackathon.
- Delivered a live, SEO-optimized production website for an external client (Palash Training).
- Active learner in AI/ML and software engineering; explores modern AI tools, automation platforms, and open-source contribution opportunities.
