

BHARATH V

Aspiring Software Engineer | Full-Stack & AI/ML Developer

Bengaluru, India | 8618463182 | bharath33053305@gmail.com

[Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

BCA undergraduate at Garden City University with a 9.5 CGPA, specializing in full-stack web development and applied AI/ML. Founder and lead developer of UniShark, a startup ecosystem platform, and builder of multiple production-grade projects spanning Android development, AI automation, and client web platforms. Strong foundation in DSA, DBMS, and OS, with hands-on experience shipping and deploying real-world applications.

EDUCATION

Garden City University, Bengaluru

2024 – 2027

Bachelor of Computer Applications (BCA) | CGPA: 9.5

SJICPUC (Pre-University College)

2022

PCMB, PUC Board | 67.7%

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, AI & Machine Learning, Python, Java, C

PROJECTS

UniShark | Founder & Full-Stack Developer

Tech Stack: Next.js, TypeScript, Tailwind CSS, Supabase, Python

- Built a startup ecosystem platform connecting student founders, co-founders, developers, designers, mentors, and investors.
- Designed founder-matching, investor discovery, startup profile, and team-formation systems end-to-end, including backend and database architecture.
- github.com/bharathDotExe/unishark

Palash Training | Full-Stack Web Developer (Client Project)

Tech Stack: PHP, MySQL, HTML, CSS, JavaScript, SEO, MilesWeb Hosting

- Developed and deployed a live, database-driven training and education platform (palashtraining.com) with course, blog, and community management.
- Built an admin dashboard for content/user management and a blog system supporting article creation, editing, and media uploads.
- Implemented technical SEO end-to-end — XML sitemaps, robots.txt, canonical URLs, Schema.org structured data, Open Graph tags, Core Web Vitals, and Google Search Console/Analytics integration.
- github.com/bharathDotExe/Palash-training-website · palashtraining.com

Univault | Android Developer

Tech Stack: Kotlin, Jetpack Compose, MVVM, StateFlow, Coroutines, Room DB, Gemini API

- Built an Android app for securely storing cards, passwords, and sensitive records on-device with biometric (PIN/fingerprint) authentication.
- Implemented OCR-based document scanning with real-time scan animation, camera/gallery/PDF upload, and an offline fallback parser for API-independent use.
- Designed a Brutalist + Material 3 UI, including a custom animated card dashboard.
- github.com/bharathDotExe/univault

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, TypeScript, SQL

Web: HTML5, CSS3, Tailwind CSS, React, Next.js, SEO

Data & ML: Pandas, NumPy, OpenCV, YOLO (learning), Google Gemini API, Prompt Engineering, AI Automation

Backend: Node.js, PHP

Databases: Supabase, MongoDB

Tools & Platforms: Git, GitHub, VS Code, npm, Vercel, Postman, n8n, Figma, Canva

Currently Learning: Docker, Kubernetes, Cloud Computing

ACHIEVEMENTS & INTERESTS

- Founded and built UniShark, a full-stack startup ecosystem platform, from concept to deployment.
- Actively building Suraksha, a multi-agent AI system (ADK Python, Gemini 2.5 Flash) to detect fake job/internship offers, for the Google for Developers × AI House × HiDevs AI Agent Builder Series 2026 hackathon.
- Delivered a live, SEO-optimized production website for an external client (Palash Training).
- Active learner in AI/ML and software engineering; explores modern AI tools, automation platforms, and open-source contribution opportunities.
